Summary

• Full-Stack Developer with hands-on experience in React.js, Node.js, and PostgreSQL. I designed and built DiploChain from scratch — a blockchain-based diploma verification platform (Solidity/Ganache, IPFS, Web3) graded 16/20 as my final year project. I enjoy working across the full stack, from database design to frontend deployment, and I care about writing clean, maintainable code.

Skills

- JavaScript | React.js | Vite | Node.js | Express.js | PostgreSQL | Solidity | Web3.js | Truffle | Ganache | IPFS | Pinata | Git | GitHub | REST APIs | HTML | CSS | TailwindCSS | MetaMask
- Full-Stack Development | Blockchain Development | Smart Contracts | Decentralized Apps (dApps) | Database Management | API Development | Web3 Integration | Deployment & Hosting
- **Languages:** Arabic (Native) | French (Fluent) | English (Intermediate)

Experience

Full Stack Developer 2025 — 2026 (Final Year Project)

DiploChain Project — FST Errachidia

Agadir, Morocco

- Developed the backend using Node.js and Express.js, and managed a PostgreSQL database to store diploma records, user roles, and verification logs.
- Built the frontend with React.js and Vite, adding QR code scanning, CNE-based search, and hash verification. Also handled multilingual support (FR/AR/EN) and dark mode.
- Wrote Solidity smart contracts for diploma issuance and verification, deployed them on a local Ganache blockchain via Truffle, and connected MetaMask for wallet authentication.
- Integrated IPFS through Pinata for decentralized diploma file storage, ensuring tamper-proof retrieval via content-addressed links.
- Set up role-based access control (RBAC) covering four profiles — Admin, Employer, Student, and Visitor — each with its own permissions and dashboard.
- Handled the project end-to-end on my own: from gathering requirements to deploying the frontend on Vercel and configuring the backend services.
- Used Git and GitHub throughout for version control and tracked all changes across the full development cycle.

Projects

- **DiploChain — Diploma Verification Platform:** Full-stack dApp (React+Vite / Node.js+Express / PostgreSQL / Solidity / IPFS/Pinata / MetaMask). Final year project graded 16/20.
- **Portfolio:** Personal site built with React.js, deployed on Vercel. (zakaria-portfolio-rose.vercel.app)
- **Employee Management App:** PERN stack CRUD app — add, edit, delete employees with a clean table UI. (employee-management-crud-1-1wuy.onrender.com)
- **STYLE-NA — Fashion Store:** E-commerce platform targeting the Moroccan fashion market. (style-na-frontend.vercel.app)
- **Boutique Robes:** Women's dress shop with a React.js + TypeScript + Vite stack and WhatsApp integration. (projet-javascript-1.vercel.app)
- **Coffee Website:** Simple, responsive café landing page in HTML/CSS/JS. (coffee-website-eta-ten.vercel.app)
- **DiploChain — Smart Contracts:** Wrote and deployed Solidity contracts for on-chain diploma issuance and verification via Truffle/Ganache.
- **DiploChain — IPFS Storage:** Connected Pinata API so diploma files are pinned to IPFS and retrievable by hash.
- **DiploChain — Access Control:** Implemented protected routes and separate dashboards for Admin, Employer, Student, and Visitor roles.
- **DiploChain — Multilingual + Dark Mode:** Full i18n in French, Arabic (RTL), and English, plus CSS-variable-based dark mode toggle.
- **DiploChain — Verification Engine:** Three lookup methods: hash, QR code scan, and CNE search — querying both the blockchain and PostgreSQL.
- **GitHub:** github.com/zbatti-droid — all project source code.

Education

- | | | | |
|---|---|---|-------------|
| | FST Errachidia | <i>Errachidia, Morocco</i> | 2026 |
| • | Licence Informatique — Filière Génie Logiciel: | Full-Stack web development, algorithms, databases, software engineering, and computer networks. | |
| | Université Moulay Ismaïl | <i>Meknès, Morocco</i> | 2025 |
| • | DEUST MIP (Mathématiques, Informatique, Physique): | mention Passable. | |
| | Lycée Sidi Lhaj Lhbib | <i>Morocco</i> | 2022 |
| • | Baccalauréat Sciences Physiques: | | |
